

## ABOUT US

CAD/CAM Services was started in 1986, primarily selling high end CAD Systems. In 1988 CAD/CAM Services added scanning and conversion services to its list of hardware and software products. Located in Celina, Texas, USA, we are a small, woman-owned business.

CAD/CAM's Medical Division is an industry leader in medical scanning technology and electronic medical records management. Our subsidiaries include XRayScan.com and RadiologyServicesOnline.com. XRayScan.com provides X-ray scanning and digitizing services, hardware and software. RadiologyServicesOnline.com provides comprehensive web-based storage, exchange and interpretation of images for radiology providers.

Our medical imaging experts and software development team provide innovative solutions designed to reduce costs, secure patient information, and navigate the transition to the Electronic Health Records (EHR). We offer an extensive range of products designed to help transform the way you manage, protect, store and recover patient information including:

- Physical Records Management Services
- Physical to Digital Conversion Services
- Digital Cloud Storage Solutions
- Healthcare Consulting

Contact us today to learn more about cost-effective solutions to help you improve your efficiency.

## OTHER MARKETS WE SERVE

CAD/CAM Services also provides document imaging services and secure AcceleDOCS applications for the Legal, Financial, and AEC Markets, as well as department -specific AcceleDOCS applications for Human Resources, Accounting and more. Ask about document imaging and AcceleDOCS applications for your needs.

### X-RAY SCANNING SERVICES

We scan all types of x-rays, up to 14 x 17" film and we recognize down to a 44mm Spot size. We've scanned over a million x-rays, compressed the images and have sent them to all types of PACS systems. We are one of the few companies in the world to have the experience of scanning over a million x-rays and our experience in high-volume x-ray scanning is second to none.

We are experts at image compression and directly support DICOM with a 50-1 image compression. This allows a standard size film to be reduced to less than a one (1) megabyte image, which directly relates to the ability to quickly share lossless images over the Internet.

# Medical Imaging Technology at Work for You

Connecting your staff to the medical records they need

### AcceleDOCS

AcceleDOCS is CAD/CAM Services newest addition to our suite of SaaS/Cloud medical solutions. Used as a stand-alone document management application or bundled with our RSO solution, AcceleDOCS offers secure, HIPPA-approved web-based access to digital medical records.

#### Text-based Search Capability

Search for any word or string of words in the documents you have permissions to access, and our "fuzzy logic" will find the document and, locate the place in the document where the text occurs, even if you spelled it wrong during your search!

- Search results in seconds, even with hundreds of users logged on and millions of pages to search
- Search across unrelated document types, such as PDFs, office documents, emails, CAD files and more

- Support Phrase, Boolean, Proximity, directed proximity, phonic, stemming, numeric, full macros, all types of wild cards, full expressions, fuzziness levels from 0-10, and even concept/synonym/thesaurus searching

#### Audit Trails

Track exactly who accessed a document, and the time and date they accessed it. Also be alerted to attempted access by users not authorized for a particular document.

#### Usage Tracking

Track department or customer use for accounting purposes.

#### Customizable

Easily set up for file access the way you're used to working.

Ask for a demo today!

### RADIOLOGY SERVICES ONLINE (RSO)

RSO provides comprehensive web-based storage, exchange and interpretation of images for radiology providers. This software-as-a-service (SaaS) solution offers a proven Cloud application that replaces the need for expensive PACS equipment.

#### Mobile X-ray/ultrasound Providers

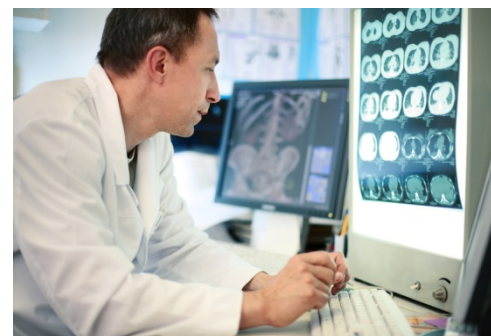

RSO unites the radiologist, the technician and the facility to create a fast, versatile and economically viable solution, which enables the images and data to be seen and stored online. RSO automation has become a key factor in keeping costs down and increasing efficiency to help you remain competitive.

#### Radiology Practices in Small Hospitals

Hospitals, clinics, imaging centers and specialists can administer and distribute images regardless of whether they are previous, current or future vendors. Physicians have better access to images and reports with RSO's DICOM system. It allows them to make a faster diagnosis, potentially from anywhere in the world where there is internet access.

### Electronic Medical Records (EMRs)

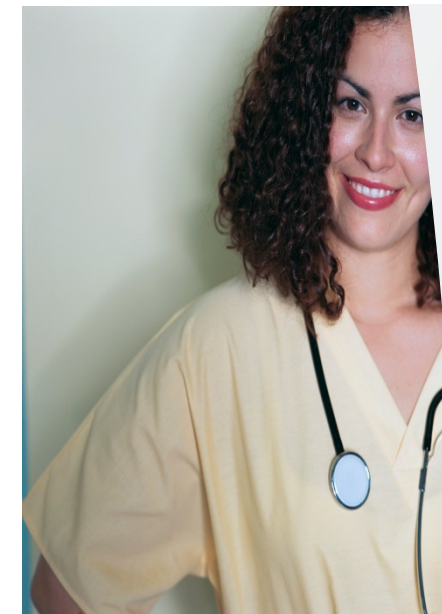

Electronic Medical Records (EMR) offer great benefits for patients and their doctors. EMR software providers make it possible for electronic medical records to be shared among patients, doctors and other medical providers to offer important information such as blood

type, prescribed drugs, medical conditions and other aspects of a patient's medical history.

However, 90% of EMR software does not offer an Xray imaging interface.

Now, Radiology Services Online can provide a linkable cloud computing module that enables EMR software to bring teleradiologists full Dicom zero-footprint online imaging with one login to your EMR software. There is nothing to buy, nothing to install, nothing to set up for users, so your support requirements are minimal.

### X-RAY FILM DIGITIZERS

Convert your X-ray film into high quality digital images with one of our x-ray film scanners. We are authorized resellers of Vidar, IDD, Kodak, Radlink or Howtek x-ray scanners. Our experts will be happy to recommend the most cost-effective scanning solution for your needs. .

### X-RAY SCANNING SOFTWARE

We offer premier diagnostic and imaging manipulation software tools, including Digital Jacket, eFlim Workstation, eFilm Scan, DCOM & HIS/RIS Connectivity, Clinical Express, Patient Gallery and FastAttach Payment Processing

### MEDICAL MONITORS

We offer high resolution Dome color and grayscale displays. Models include cost-effective and versatile DICOM calibrated monitors for use in operating rooms, cardiology, diagnostic viewing and more. Ask one of our medical experts to help you select the correct display for your requirements.
